FINISHING TIPS [POLYURETHANE MILLWORK]

Chadsworth's polyurethane millwork products, like wood products, have the potential to expand and contract when the temperature or humidity fluctuates. We recommend acclimating your polyurethane products to normal room conditions for (24) hours before initiating the installation.

Chadsworth Incorporated's™ products are factory-primed and ready to finish. They may be painted, stained, or faux finished. Fill screw or nail holes using a vinyl spackle or plastic filler. If the primed finish has been scratched or damaged, the area should be spackled, sanded and touched up with primer prior to painting.

Chadsworth recommends a quality latex or oil-based paint for a smooth, solid finish. If you are preparing a faux finish, including woodgrain, use an impenetrable glazing stain or paint.

[DO NOT use lacquer-based paint products on Chadsworth polyurethane products.](#)
